Scientific bibliography on the association between oral hygiene and dental caries

Dental biofilm is recognized as a major etiological factor in dental caries. Its mechanical control, particularly when combined with adequate fluoride exposure, contributes to the prevention of carious lesions.

Ces publications couvrent les preuves épidémiologiques, microbiologiques et cliniques reliant le contrôle de la plaque à la prévention des caries.

Il s'agit de références pertinentes soutenant le lien entre contrôle de plaque/biofilm, hygiène orale et prévention de la carie.
